Stat101 Homework Long Report for Topic 06 Comparison among Sections

Overview

The homework results that will be compared are Topico6.A.csv, Topico6.B.csv, Topico6.C.csv. Those files record the scores of students who are taught by different instructors. The homework questions examine the understanding of Topico6.

Full credit for this homework assignment is 25. The histograms of total scores by section are shown in Figure 1. The summary statistics of the scores are given by Table 1 and Figure 2. The table is sorted by the mean score of each section. Section A has the highest mean score, and section A also has the highest median. Section B has the largest standard deviation of the scores, while section A has the smallest.

| | Mean | Std.dev | Min | Q1 | Median | Q3 | Max |
|---|-------|---------|------|-------|--------|-------|-------|
| A | 20.60 | 3.73 | 8.00 | 19.00 | 22.00 | 23.00 | 25.00 |
| C | 20.38 | 5.43 | 0.00 | 18.00 | 22.50 | 24.75 | 25.00 |
| В | 18.86 | 6.30 | 0.00 | 16.25 | 22.00 | 23.00 | 25.00 |

Table 1: Summary of overall scores by section. Sections are ordered from the highest mean score to the lowest.

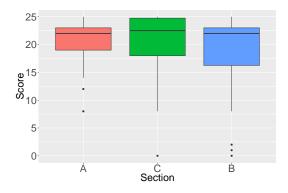

Figure 2: Boxplot for the overall scores by section. The highest median comes from Section A.

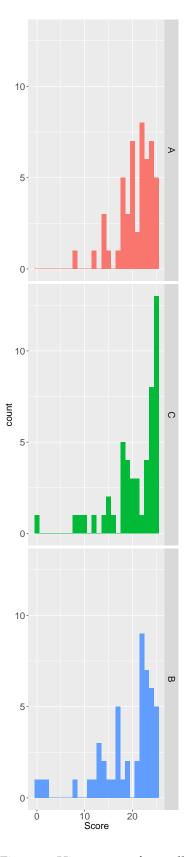

Figure 1: Histograms of overall scores by section. The support of the scores is [0,25].

Learning Outcomes

The learning outcomes in this topic are:

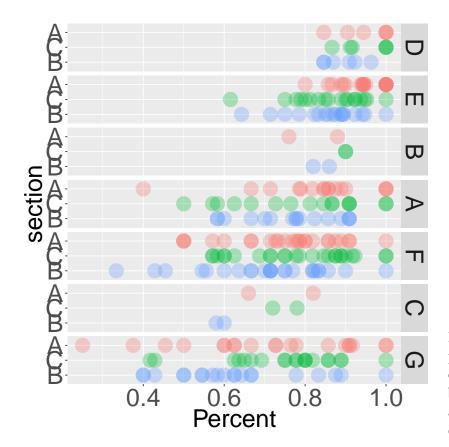

- A. Use standardizing to determine how many standard deviations an observation is away from the mean value.
- B. Use z-scores to compare observations for different quantitative variables.
- C. Explain how standardizing affects the shape, center, and variability of the distribution of a quantitative variable.
- D. Determine which quantitative variables could be modeled using the normal distribution by interpreting graphical representations of the variable.
- E. Apply the 68-95-99.
- F. Find percentile or area values for any given observation from a normal distribution.
- G. Find the value of an observation when given a percentile or area value from the normal distribution.

Figure 3 displays the percentage correct of each question by section. The graph is facetted by learning outcome. In addition, sections are ordered by their overall mean scores and learning outcomes are ordered by their average percentage correct scores.

Table 2 and Figure 4 give the average percentages correct for each learning outcome. The learning outcome D has the highest correct percentage, and G has the lowest average correct percent.

| | Α | C | В |
|---|-------|-------|-------|
| D | 95.00 | 94.00 | 90.00 |
| E | 93.67 | 86.33 | 85.67 |
| В | 82.00 | 90.00 | 84.00 |
| A | 84.00 | 78.50 | 76.50 |
| F | 74.80 | 79.60 | 70.40 |
| C | 74.00 | 75.00 | 59.00 |
| G | 71.50 | 72.50 | 62.00 |

Table 2: Average percentages correct for each learning outcome by section. The learning outcomes are sorted by the average percentages correct of all sections, from the highest to the lowest.

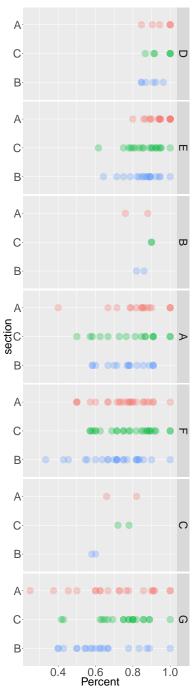

Figure 3: Scatterplot of correct percentage by learning outcome. The sections are sorted by their overall mean scores, and the learning outcomes are ordered by the mean correct percentage.

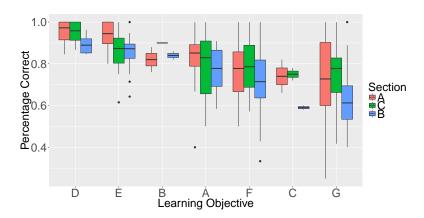

Figure 4: Side-by-side boxplots for learning objectives by section. The learning objective on the left has the highest average correct percentage, while the one on the right has the lowest.

To analyze the students' performance by section and learning outcomes, we consider the generalized linear mixed model:

$$g(E[Y_{ijk}|u_{jk}]) = \mu + \tau_i + s_j + \tau s_{ij} + u_{jk}$$

where i=1,...,7 learning outcomes; j=1,...,3 sections; $k=1,...,n_j$ students. Y_{ijk} is the score (scaled in [0,1]) of the kth student of section j in the ith learning outcome. τ_i and s_j are the fixed effects of learning outcome i and section j. τs_{ij} is the interaction between the two factors. u_{jk} is the random effect from the students with $u_{jk} \sim N(0, \sigma_u^2)$.

By default the software R sets $\tau_1 = 0$, $s_1 = 0$ and $\tau s_{ij} = 0$, $\forall i, j = 1$ as the identifiability constraints.

Table ?? and ?? present the p-values of multiple comparison in the learning outcomes and the sections. The result of the model is as follows.

```

Question Sets

The question set is a set of questions which are randomly delivered to the students. The questions in each question set cover the same learning outcome and should be equally difficult.

The average percentages correct for question sets are shown in Table 3 and Figure 5. Among all the 21 question sets, question set I has the highest correct percentage. U is the hardest question set which has the lowest average score.

Warning in formatC(x = structure(c(2L, 4L, 9L, 1L, 9L, 4L, 4L, 1L, 5L, 5L, : class of 'x' was discarded

Table 5: Summary statistics of each question

Below is the key for the question types.

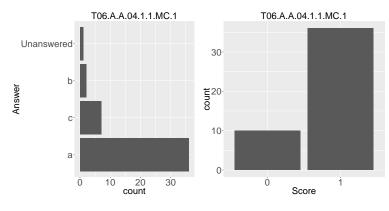

| MC/MU | Multiple Choice |
|-------|-------------------|
| MA | Matching |
| TF | True/False |
| FB | Fill in the Blank |
| CA | Calculation |
| JS | Jumbled Sentence |

Summary of Questions

The description for each question is as follows:

(1) Question "To6.A.A.o4.1.1.MC.1" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 46 out of the total of 150 students. The average score was 0.78 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| a | 36 |
| c | 7 |
| b | 2 |
| Unanswered | 1 |

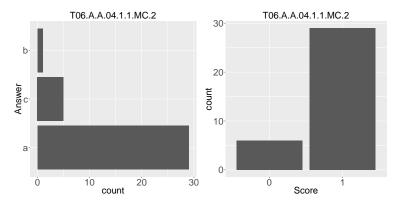

| Summary | Value |
|---------|-------|
| Mean | 0.78 |
| Std.dev | 0.42 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

The z-score for a particular observation is z = 1.5. This means the observation is

- *a. 1.5 standard deviations above the mean.
- b. 1.5 standard deviations below the mean.
 - c. 1.5 units above the mean.
- d. 1.5 units below the mean.

(2) Question "To6.A.A.o4.1.1.MC.2" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 35 out of the total of 150 students. The average score was 0.83 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|--------|-------|
| a | 29 |
| c | 5 |
| b | 1 |
| | |

| Summary | Value |
|---------|-------|
| Mean | 0.83 |
| Std.dev | 0.38 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

The z-score for a particular observation is z = 0.4. This means the observation is

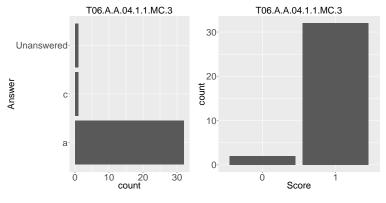

*a. 0.4 standard deviations above the mean.

b. o.4 standard deviations below the mean.

- c. o.4 units above the mean.
- d. o.4 units below the mean.

(3) Question "To6.A.A.o4.1.1.MC.3" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 34 out of the total of 150 students. The average score was 0.94 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| a | 32 |
| c | 1 |
| Unanswered | 1 |

| Summary | Value |
|---------|-------|
| Mean | 0.94 |
| Std.dev | 0.24 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

The z-score for a particular observation is z = 2.3. This means the observation is

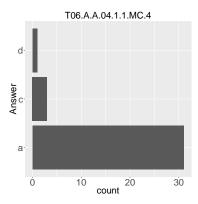

*a. 2.3 standard deviations above the mean.

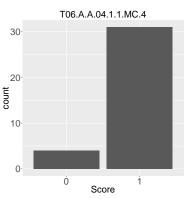

b. 2.3 standard deviations below the mean.

- c. 2.3 units above the mean.
- d. 2.3 units below the mean.

(4) Question "To6.A.A.o4.1.1.MC.4" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 35 out of the total of 150 students. The average score was 0.89 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|--------|-------|
| a | 31 |
| С | 3 |
| d | 1 |

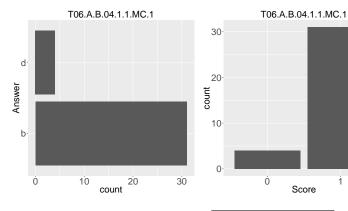

| Summary | Value |
|---------|-------|
| Mean | 0.89 |
| Std.dev | 0.32 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

The z-score for a particular observation is z = 3.4. This means the observation is

- *a. 3.4 standard deviations above the mean.
- b. 3.4 standard deviations below the mean.
 - c. 3.4 units above the mean.
- d. 3.4 units below the mean.

(5) Question "To6.A.B.o4.1.1.MC.1" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 35 out of the total of 150 students. The average score was 0.89 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|--------|-------|
| b | 31 |
| d | 4 |
| | |

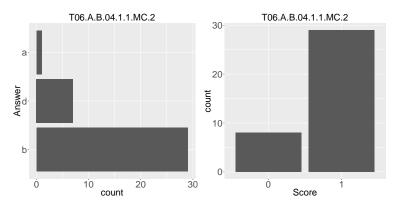

| Summary | Value |
|---------|-------|
| Mean | 0.89 |
| Std.dev | 0.32 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

The z-score for a particular observation is z = -1.2. This means the observation is

- a. 1.2 standard deviations above the
- *b. 1.2 standard deviations below the mean.
 - c. 1.2 units above the mean.
 - d. 1.2 units below the mean.

(6) Question "To6.A.B.o4.1.1.MC.2" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 37 out of the total of 150 students. The average score was 0.78 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|--------|-------|
| b | 29 |
| d | 7 |
| a | 1 |
| | |

| Summary | Value |
|---------|-------|
| Mean | 0.78 |
| Std.dev | 0.42 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

The z-score for a particular observation is z = -0.8. This means the observation is

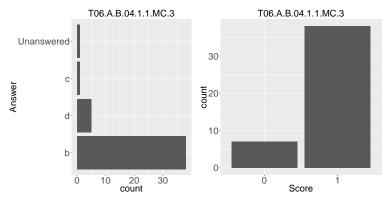

a. o.8 standard deviations above the mean.

*b. o.8 standard deviations below the mean.

- c. o.8 units above the mean.
- d. o.8 units below the mean.

(7) Question "To6.A.B.o4.1.1.MC.3" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 45 out of the total of 150 students. The average score was 0.84 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| b | 38 |
| d | 5 |
| c | 1 |
| Unanswered | 1 |

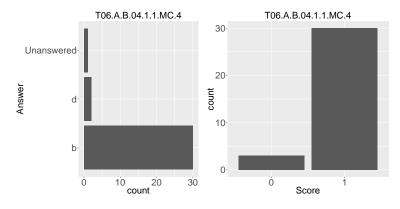

| Summary | Value |
|---------|-------|
| Mean | 0.84 |
| Std.dev | 0.37 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

The z-score for a particular observation is z = -2.7. This means the observation is

- a. 2.7 standard deviations above the mean.
- *b. 2.7 standard deviations below the mean.
 - c. 2.7 units above the mean.
 - d. 2.7 units below the mean.

(8) Question "To6.A.B.o4.1.1.MC.4" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 33 out of the total of 150 students. The average score was 0.91 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| b | 30 |
| d | 2 |
| Unanswered | 1 |

| Summary | Value |
|---------|-------|
| Mean | 0.91 |
| Std.dev | 0.29 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

The z-score for a particular observation is z = -3.1. This means the observation is

a. 3.1 standard deviations above the mean.

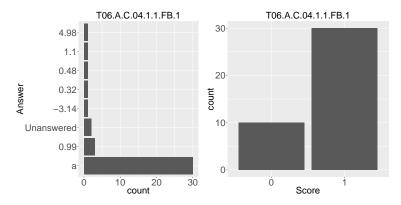

*b. 3.1 standard deviations below the mean.

c. 3.1 units above the mean.

d. 3.1 units below the mean.

(9) Question "To6.A.C.o4.1.1.FB.1" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 40 out of the total of 150 students. The average score was 0.75 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| a | 30 |
| 0.99 | 3 |
| Unanswered | 2 |
| -3.14 | 1 |
| 0.32 | 1 |
| 0.48 | 1 |
| 1.1 | 1 |
| 4.98 | 1 |

| Summary | Value |
|---------|-------|
| Mean | 0.75 |
| Std.dev | 0.44 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

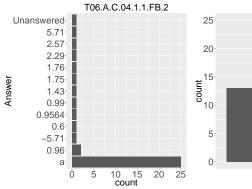

In a sample of 25 male newborns, the mean birth weight was 3.4 kg and the standard deviation was 0.35 kg.

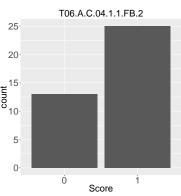

The z-score for a birth weight of 4.5 kg is ______. Round your answer to 2 decimal places.

- a. 3.14
- b. 3.15
- c. 3.13

(10) Question "To6.A.C.o4.1.1.FB.2" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 38 out of the total of 150 students. The average score was 0.66 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| a | 25 |
| 0.96 | 2 |

| 5.71 | 1 |
| Unanswered | 1 |

| Summary | Value |
|---------|-------|
| Mean | 0.66 |
| Std.dev | 0.48 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |
| | |

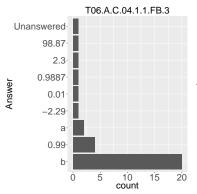

In a sample of 25 male newborns, the mean birth weight was 3.4 kg and the standard deviation was 0.35 kg.

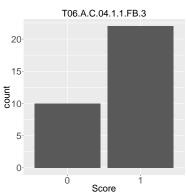

The z-score for a birth weight of 4.0 kg is ______. Round your answer to 2 decimal places.

- a. 1.71
- b. 1.72
- c. 1.70
- d. 1.7

(11) Question "To6.A.C.o4.1.1.FB.3" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 32 out of the total of 150 students. The average score was 0.69 out of 1.

(Back to the question summary Table 5.)

| 2.3 | 1 |
| 98.87 | 1 |
| Unanswered | 1 |

| Summary | Value |
|---------|-------|
| Mean | 0.69 |
| Std.dev | 0.47 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

In a sample of 25 male newborns, the mean birth weight was 3.4 kg and the standard deviation was 0.35 kg.

The z-score for a birth weight of 4.2 kg is ______. Round your answer to 2 decimal places.

Correct Answer(s):

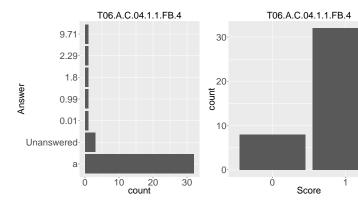

a. 2.28

b. 2.29

c. 2.27

(12) Question "To6.A.C.o4.1.1.FB.4" is given on the right. This question was selected from the question set with a frequency of 0.25. The question was administered to 40 out of the total of 150 students. The average score was 0.8 out of 1.

| Median | 1.00 |
| Max | 1.00 |

The height of adult women is thought to have a mean of 65 inches and a standard deviation of 2.5 inches. The height of adult men is thought to have a mean of 71 inches and a standard deviation of 3 inches. In the same family, the son is 73 inches tall and the daughter is 67 inches tall. Who is taller among their gender, the son or daughter?

- *a. The daughter
- b. The son
- c. The daughter and son are the same height within their gender.

(18) Question "To6.B.F.01.1.1.MC.compare2" is given on the right. This question was selected from the question set with a frequency of 1. The question was administered to 150 out of the total of 150 students. The average score was 0.88 out of 1.

What percentage of adults have an IQ score of less than 87 points?

*a. 9.68%

b. 15.15%

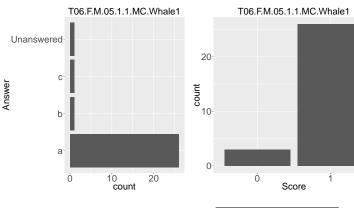

c. 4.46%

d. 90.32%

e. 84.85%

(48) Question "To6.F.M.o5.1.1.MC.Whale1" is given on the right. This question was selected from the question set with a frequency of 0.2. The question was administered to 29 out of the total of 150 students. The average score was 0.9 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| a | 26 |
| b | 1 |
| c | 1 |
| Unanswered | 1 |

| Summary | Value |
|---------|-------|
| Mean | 0.90 |
| Std.dev | 0.31 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

For the remaining questions, use either a z-table or an applet or both to do the calculations. Depending on the method used, the final answer could be subject to a small amount of rounding error. Assume the length of female humpback whales can be modeled with a normal distribution with a mean of 13.7 meters and a standard deviation of 0.5 meters. What percentage of female humpback whales will be shorter than 13 meters in length?

*a. 8.08%

b. 91.92%

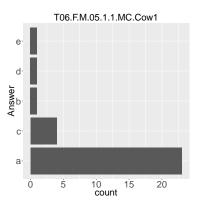

c. 14.92%

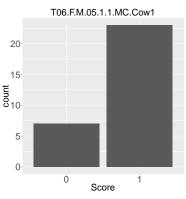

d. 85.08%

e. o.82%

(49) Question "To6.F.M.o5.1.1.MC.Cow1" is given on the right. This question was selected from the question set with a frequency of o.2. The question was administered to 30 out of the total of 150 students. The average score was 0.77 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|--------|-------|
| a | 23 |

| Answer | Count |
|------------|-------|
| c | 25 |
| b | 5 |
| Unanswered | 2 |
| d | 1 |

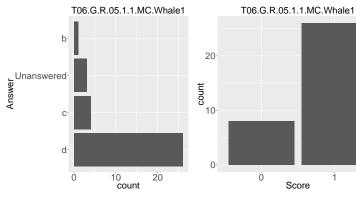

| Summary | Value |
|---------|-------|
| Mean | 0.76 |
| Std.dev | 0.44 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

Assume the distribution of IQ scores for adults can be modeled with a normal distribution with a mean score of 100 points and a standard deviation of 10 points. 25% of adults have an IQ score lower than what value?

- a. 100.3 points
- b. 89.1 points
- *c. 93.3 points
- d. 97.8 points

(73) Question "To6.G.R.o5.1.1.MC.Whale1" is given on the right. This question was selected from the question set with a frequency of 0.2. The question was administered to 34 out of the total of 150 students. The average score was 0.76 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| d | 26 |
| c | 4 |
| Unanswered | 3 |
| b | 1 |

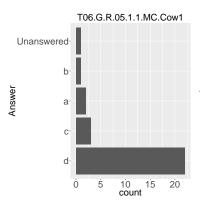

| Summary | Value |
|---------|-------|
| Mean | 0.76 |
| Std.dev | 0.43 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

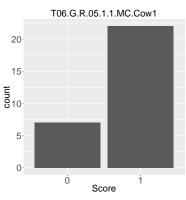

Assume the length of female humpback whales can be modeled with a normal distribution with a mean of 13.7 meters and a standard deviation of 0.5 meters. 15% of female humpback whales are shorter than what length?

- a. 14.79 meters
- b. 12.62 meters
- c. 14.22 meters
- *d. 13.18 meters

(74) Question "To6.G.R.o5.1.1.MC.Cow1" is given on the right. This question was selected from the question set with a frequency of 0.2. The question was administered to 29 out of the total of 150 students. The average score was 0.76 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| d | 22 |
| c | 3 |
| a | 2 |
| b | 1 |
| Unanswered | 1 |

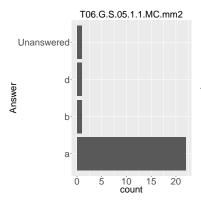

| Summary | Value |
|---------|-------|
| Mean | 0.76 |
| Std.dev | 0.44 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

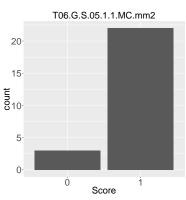

Assume the weight of a certain breed of cow can be modeled with a normal distribution with a mean of 750 kg and a standard deviation of 30 kg. 35% of cows from this breed will weigh less than what weight?

- a. 703.2 kg
- b. 802.3 kg
- c. 751.2 kg
- *d. 738.3 kg

(75) Question "To6.G.S.o5.1.1.MC.mm2" is given on the right. This question was selected from the question set with a frequency of 0.2. The question was administered to 25 out of the total of 150 students. The average score was 0.88 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| a | 22 |
| b | 1 |
| d | 1 |
| Unanswered | 1 |

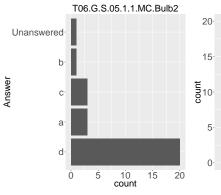

| Summary | Value |
|---------|-------|
| Mean | 0.88 |
| Std.dev | 0.33 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

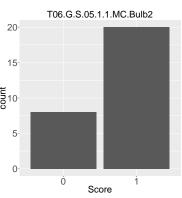

Assume the weight of bags of M&Ms can be modeled with the normal distribution with mean 50 grams and standard deviation 1 gram. 80% of all bags will have a weight under what value?

- *a. 50.84 grams
- b. 51.28 grams
- c. 50.67 grams
- d. 51.65 grams

(76) Question "To6.G.S.o5.1.1.MC.Bulb2" is given on the right. This question was selected from the question set with a frequency of o.2. The question was administered to 28 out of the total of 150 students. The average score was 0.71 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| d | 20 |
| a | 3 |
| С | 3 |
| b | 1 |
| Unanswered | 1 |

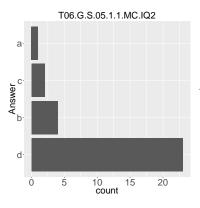

| Summary | Value |
|---------|-------|
| Mean | 0.71 |
| Std.dev | 0.46 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

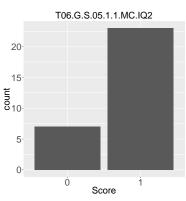

Assume the lifespan of light bulbs manufactured by Bright Inc. can be modeled with a normal distribution with a mean of 300 days and a standard deviation of 40 days. 95% of light bulbs produced by Bright Inc. survive less than how many days?

- a. 359.1 days
- b. 331.2 days
- c. 394.4 days
- *d. 365.8 days

(77) Question "To6.G.S.o5.1.1.MC.IQ2" is given on the right. This question was selected from the question set with a frequency of 0.2. The question was administered to 30 out of the total of 150 students. The average score was 0.77 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|--------|-------|
| d | 23 |
| b | 4 |
| c | 2 |
| a | 1 |

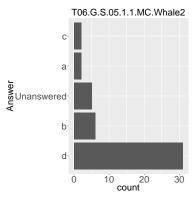

| Summary | Value |
|---------|-------|
| Mean | 0.77 |
| Std.dev | 0.43 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

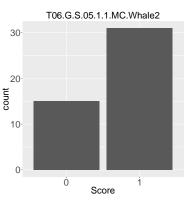

Assume the distribution of IQ scores for adults can be modeled with a normal distribution with a mean score of 100 points and a standard deviation of 10 points. 90% of adults will have an IQ score lower than what value?

- a. 126.9 points
- b. 109.8 points
- c. 115.6 points
- *d. 112.8 points

(78) Question "To6.G.S.o5.1.1.MC.Whale2" is given on the right. This question was selected from the question set with a frequency of 0.2. The question was administered to 46 out of the total of 150 students. The average score was 0.67 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| d | 31 |
| b | 6 |
| Unanswered | 5 |
| a | 2 |
| c | 2 |

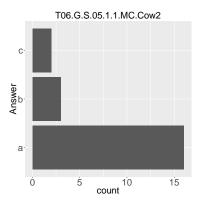

| Summary | Value |
|---------|-------|
| Mean | 0.67 |
| Std.dev | 0.47 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

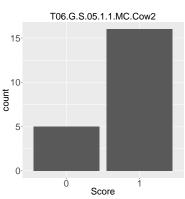

Assume the length of female humpback whales can be modeled with a normal distribution with a mean of 13.7 meters and a standard deviation of 0.5 meters. 65% of female humpback whales are shorter than what length?

- a. 14.65 meters
- b. 13.51 meters
- c. 14.07 meters
- *d. 13.90 meters

(79) Question "To6.G.S.o5.1.1.MC.Cow2" is given on the right. This question was selected from the question set with a frequency of o.2. The question was administered to 21 out of the total of 150 students. The average score was 0.76 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|--------|-------|
| a | 16 |
| b | 3 |
| c | 2 |

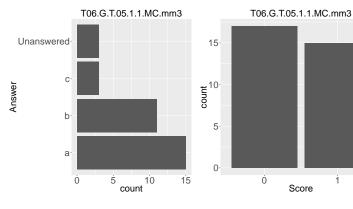

| Summary | Value |
|---------|-------|
| Mean | 0.76 |
| Std.dev | 0.44 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

Assume the weight of a certain breed of cow can be modeled with a normal distribution with a mean of 750 kg and a standard deviation of 30 kg. 70% of cows from this breed will weigh less than what weight?

- *a. 765.6 kg
- b. 770.1 kg
- c. 775.2 kg
- d. 788.4 kg

(80) Question "To6.G.T.o5.1.1.MC.mm3" is given on the right. This question was selected from the question set with a frequency of 0.2. The question was administered to 32 out of the total of 150 students. The average score was 0.47 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|------------|-------|
| a | 15 |
| b | 11 |
| c | 3 |
| Unanswered | 3 |

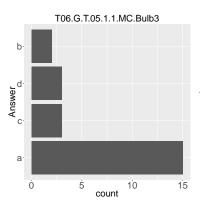

| Summary | Value |
|---------|-------|
| Mean | 0.47 |
| Std.dev | 0.51 |
| Min | 0.00 |
| Median | 0.00 |
| Max | 1.00 |

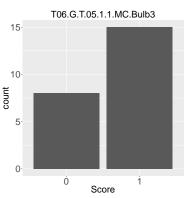

Assume the weight of bags of M&Ms can be modeled with the normal distribution with mean 50 grams and standard deviation 1 gram. 20% of all M&M bags will weigh more than what weight?

- *a. 50.84 grams
- b. 49.16 grams
- c. 50.20 grams
- d. 49.80 grams

(81) Question "To6.G.T.o5.1.1.MC.Bulb3" is given on the right. This question was selected from the question set with a frequency of o.2. The question was administered to 23 out of the total of 150 students. The average score was 0.65 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
|--------|-------|
| a | 15 |
| С | 3 |
| d | 3 |
| b | 2 |

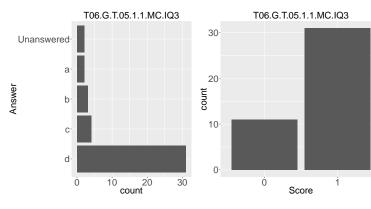

| Summary | Value |
|---------|-------|
| Mean | 0.65 |
| Std.dev | 0.49 |
| Min | 0.00 |
| Median | 1.00 |
| Max | 1.00 |

Assume the lifespan of light bulbs manufactured by Bright Inc. can be modeled with a normal distribution with a mean of 300 days and a standard deviation of 40 days. 5% of light bulbs produced by Bright Inc. survive more than how many days?

- *a. 366.0 days
- b. 378.4 days
- c. 351.2 days
- d. 341.6 days

(82) Question "To6.G.T.o5.1.1.MC.IQ3" is given on the right. This question was selected from the question set with a frequency of 0.2. The question was administered to 42 out of the total of 150 students. The average score was 0.74 out of 1.

(Back to the question summary Table 5.)

| Answer | Count |
