```
> library(knitr)
> opts_chunk$set(
+ concordance=TRUE
+ )
```

Examples

Easy Example

Here is an example you can run below:

```
> example1 = function1("it does not surpass the line")
```

Here is a second example you can run below. Unfortunately, you cannot even see teh whole example code because it runs off the page:

```
> example2 = function2(input1="this example", input2 = "has a lot of inputs", input3="which makes it
```

Can I fix this second example by forcing a break as such?:

```
> example2 = function2(input1="this example", input2 = "has a lot of inputs",
+ input3="which makes it impossible", input4 = "to fit on the same line")
```
